

Echo Visual Atlas

Standalone diagrams for understanding Echo’s architecture. These diagrams complement the main guide “What Makes Echo Tick?”

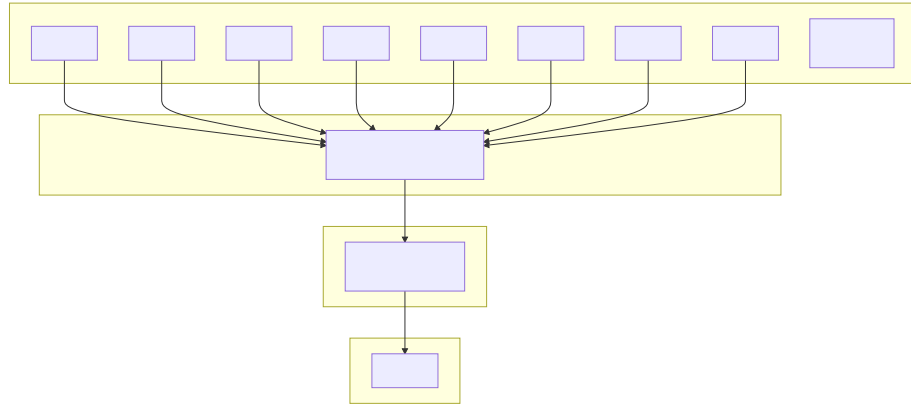

1. The Complete Tick Pipeline

2. BOAW Parallel Execution Model

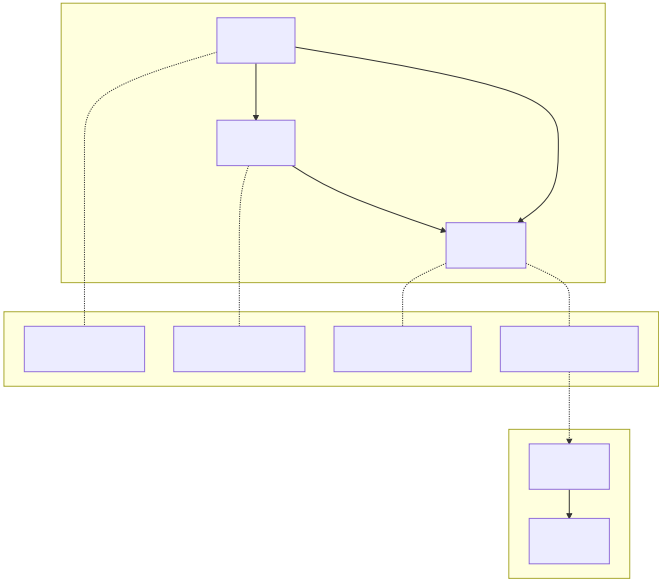

3. Virtual Shard Routing

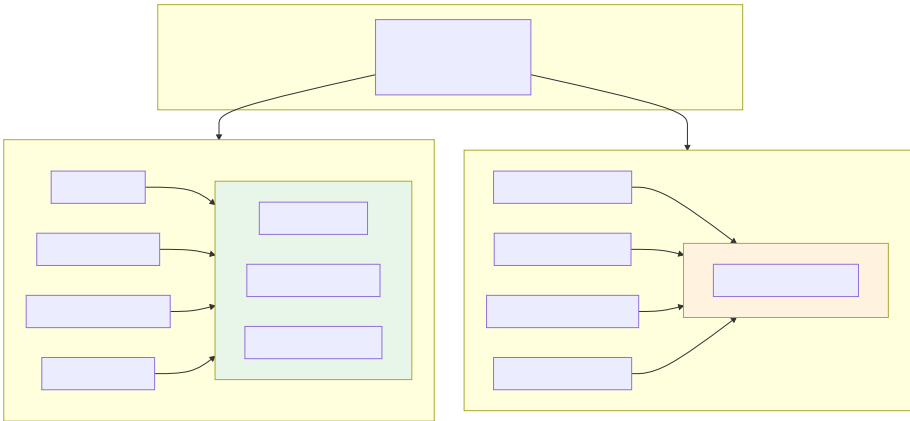

Test Vectors (Frozen Protocol)

Input (first 8 bytes)	LE u64	Shard
0xDEADBEEFCAFEBADE	0xBEBAFECAEFBEADDE	190 (0xBE)
0x0000000000000000	0x0000000000000000	0
0x2A00000000000000	0x000000000000002A	42
0xFFFFFFFFFFFFFFFF	0xFFFFFFFFFFFFFFFF	255

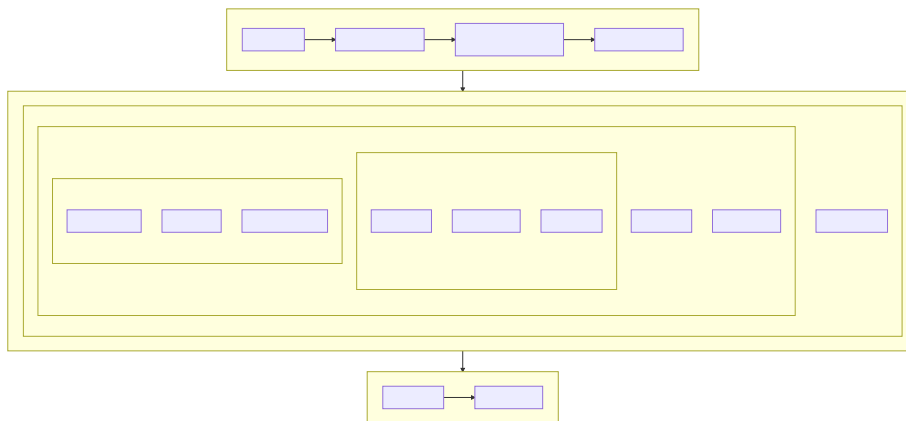

4. Two-Plane WARP Architecture

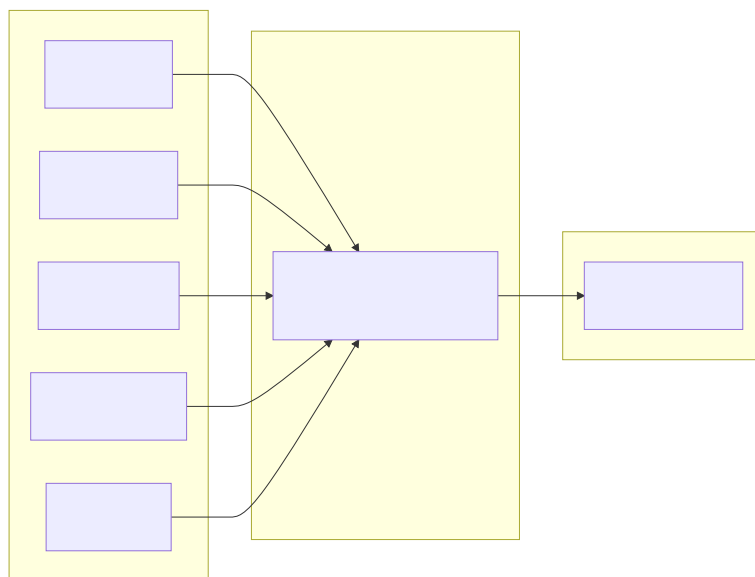

5. GraphView Contract Enforcement

6. State Root Hash Computation

7. Commit Hash v2 Structure

8. WSC Snapshot Format

WSC SNAPSHOT FILE

HEADER (fixed size)

magic	version	node_cnt	edge_cnt	offsets
8 bytes	8 bytes	8 bytes	8 bytes	8×N bytes

NODES TABLE (sorted by NodeId, 8-byte aligned)

NodeRow	NodeRow	NodeRow	...
64 bytes	64 bytes	64 bytes	
[id:32][type:32]	[id:32][type:32]	[id:32][type:32]	

EDGES TABLE (sorted by EdgeId, 8-byte aligned)

EdgeRow	EdgeRow	...
128 bytes	128 bytes	
[id:32][from:32][to:32]	[id:32][from:32][to:32]	
[type:32]	[type:32]	

OUT_INDEX (per-node ranges into out_edges)

Range	Range	Range	...
16 bytes	16 bytes	16 bytes	
[start:8][len:8]	[start:8][len:8]	[start:8][len:8]	

ATTACHMENT INDEX (per-slot ranges)

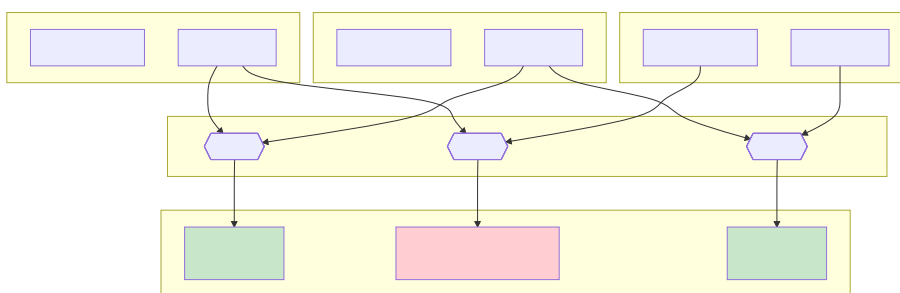

Similar structure to OUT_INDEX

BLOB ARENA (variable-length payloads)

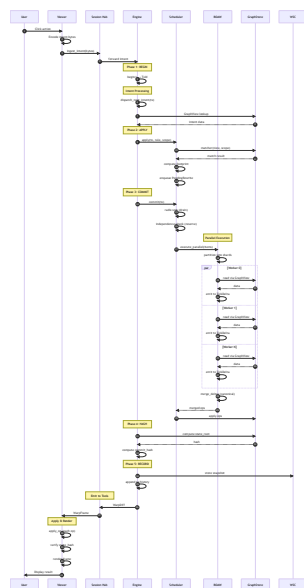

[payload bytes...] [payload bytes...] [payload bytes...] ...

Referenced by (offset: u64, length: u64) tuples

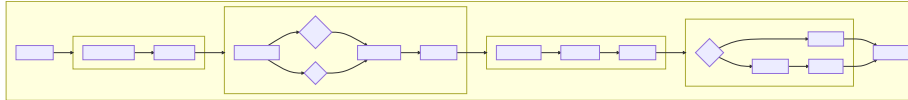

9. Footprint Independence Check

10. Complete Data Flow: Intent to Render

11. Viewer Event Loop

Visual Atlas generated 2026-01-18. Use alongside “What Makes Echo Tick?” for complete understanding.
